

LESSONS LEARNED REPORT	
Project Name	Budget.io
Project Sponsor	Yogesh Sharma
Project Manager	Froillo Raquinio
What went well during the project?	
Starting the project with the idea of automating every transaction a user has was a great start.	
Prototypes helped us finalize how we want our website to look and work.	
Building the website went well because of knowledge acquired from the labs.	
What did not go well during the project?	
Fake data had to be used because bank transactions are private information, this lead to us having to manually input data instead.	
Wasted time by looking into the MERN stack.	
Meeting some deadlines. For example, the website was fully finished late.	
A member of our group left so distribution had to be redone.	
Lack of feedback.	
What should we do differently next time?	How will this be done?
Stack research and decision making.	Allocate a specific phase at the beginning of the project for technology stack research.
Deadline management	Improve planning and scheduling by utilizing methodologies learned in class better. Agile methodology should've been implemented better by breaking down the project into more manageable sprints.
Team management	A clear documentation process would've helped the distribution of work better.
User Feedback Incorporation	Involve other potential users like friends or classmates to get more opinions about the website. This will make coming up with features or perfecting them easier.
