

PROJECT SCOPE STATEMENT	
Project Name	Budget.io
Project Deliverables	Detailed Description
Lo-fi prototype	A lo-fi prototype for a budgeting app serves as an early, tangible representation of the app's design and functionality. It provides a foundation for user testing and iterative design improvements before moving on to the development of a high-fidelity prototype or the actual application. This contains basic user interface, screen flow and user input simulation.
Hi-fi prototype	A high-fidelity (hi-fi) prototype of a budgeting app represents a more polished and detailed version of the application compared to a lo-fi prototype. It closely mimics the final product's look, feel, and functionality. This provides animations and transitions, functional interactions and a realistic visual design.
Website	A website that automates everything except the input of transaction data.
Presentation	A powerpoint that goes into important details about the project.
Github setup	A directory of files that includes the actual website, documentation, presentation and resources.
Project Exclusions	
Marketing strategies	
Long-term maintenance
